There are two assessments, which are described below.

1. Online Test

The questions of the online test will be open between **9:00 am, Friday, 6 March and 9:00 am Saturday, 7 March 2026.** It will

- be an open-book test, that is, you can use the lecture presentations, lecture notes, seminar materials,
- cover the content of the entire module,
- be an online test, which means you will be able to complete it at a place where **you can ensure uninterrupted internet access,**
- be open for one day, during which you need to complete the test within 45 minutes (If you are a student with ILP (Inclusive Learning Plans), the duration will be 57 minutes), and
- have a 20% weighting.

Please be noted:

- You have only one attempt, which means: If you leave the test, you will not be allowed to enter it again.
- You may need to write and execute Python code to answer certain questions.
- A question in the VLE may have different correct answers, because the question uses different datasets, or the question's choices are shuffled. As a result, the correct answer, choice (a) say, in one student's question may become (c) in others.
- Before you answer a question, read it carefully. For instance, some students may fill in 81 when the correct answer is 0.81. They may argue that 81 can be regarded as 81% and is hence the same as 0.81. Since your answers will be marked by the Moodle system, it will not mark your answer correct. It is correct only if there is a sign % immediately after 81 in the question. But if the question does not allow you to input the sign %, it suggests that 81 is incorrect. Moreover, if 81 is regarded correct, then 810 is correct as well because it is 810‰. Similarly, 8100 is correct as it is 810‰‰, etc.
- A dataset needed in a question can be downloaded by clicking the hyperlink provided. To avoid the situation that your network or computer fails to download a dataset, I will paste the dataset as a table under the associated question so that you will be able to copy the table and paste it to a file in your computer for analysis. I suggest that you practise how to copy and paste an online data table to a file like an MS Excel file (a csv file, for instance).
- The marking criterion of each question/part is set in the question/part. Consequently, the marking is done by the Moodle system, i.e., the computer system. As such, the marking is consistent.

2. Data Analysis Report

The **data analysis report assignment** will have an 80% weighting. It will cover the content of all the eight weeks in the module. The assignment questions and marking criteria will be available in the week commencing 23 February 2026. The submission deadline is 12:00 noon, 18 March 2026.
